EXPERIENCE

Associate Software Engineer

Kindlife

Jul 2024 – Present

Gurugram

- Site Reliability & Infrastructure Stability**
 - Maintained production infrastructure across caching, application, database and storage layers to support platform availability.
 - Stabilized autoscaling by fixing startup scripts, NFS mounts, permissions and symlink issues; improved instance init during spikes.
- Caching Optimization & Performance Improvements**
 - Improved **Varnish cache hit ratio from 35% to 82%**, reducing backend server and database load during peak traffic.
 - Removed user-agent based cache fragmentation and optimized VCL; implemented cache warmer to reduce cold-cache impact.
- Database Performance & Query Optimization**
 - Collaborated with development teams to identify slow SQL queries and inefficient DB operations impacting performance.
 - Investigated bottlenecks using logs/runtime metrics and analyzed DB traffic via **ProxySQL** for query behavior and load.
- Automation, Monitoring & Incident Response**
 - Built **Jenkins automation jobs** for DB backups, symlink checks, NFS validation and infrastructure monitoring; improved CI/CD operational checks.
 - Implemented monitoring/alerting for resource spikes and outages; enhanced **Varnish VCL logging** for tracing and integrated **WhatsApp webhook alerts**.
- Cost Optimization & Security Controls**
 - Implemented monitoring for cloud cost thresholds and resource consumption across GCP workloads; improved storage/infra utilization.
 - Implemented **IP blocking, rate limiting and crawler control scripts** to reduce malicious/unnecessary traffic and protect backend capacity.
- N8N Automation Platform Deployment**
 - Deployed and configured **self-hosted N8N** infrastructure including server setup, networking and application configuration.
 - Completed **GCP CASA approval** and integrated Google Mail/Calendar + internal tools; built internal APIs for workflows/credentials.

Software Developer Trainee

Kindlife

Jul 2023 – Jun 2024

Gurugram

- Improved server performance by **30%** through caching optimization and service tuning.
- Built a **Product Margin Management Panel** for **40,000+ products** with Excel import/export and strong validations (reduced incorrect entries by **95%**).
- Automated margin updates through optimized SQL queries and background jobs to reduce manual workload.

ACHIEVEMENTS

- Stabilized autoscaling infrastructure by fixing initialization failures, mount issues, permissions and deployment inconsistencies.
- Designed monitoring/alerting for infra health and cost thresholds, and deployed internal automation using **N8N + Jenkins**.

SKILLS

Languages

Python

JavaScript

C++

Cloud & Infrastructure

Google Cloud

AWS

CDN

Compute Engine

Cloud Storage

Autoscaling

Load Balancing

Serverless Computing

EC2

DevOps & Automation

CI/CD

Jenkins

Shell Scripting

n8n

Rundeck

Terraform

Linux

Git

Docker

Databases

MySQL

ProxySQL

Caching & Performance

Varnish

Redis

Apache

Cache Optimization

Monitoring & Reliability

New Relic

Infrastructure Monitoring

Log Analysis

Incident Debugging

Networking & Security

DNS

SSL

VPC

HTTP/HTTPS

Rate Limiting

IP Blocking

VPN

EDUCATION

B.Tech Computer Science

Lovely Professional University

2020 – 2024

CGPA: 8.61

CBSE Class XII

Shri Ram Centennial School

2020

Percentage: 88.2%

CBSE Class X

Shri Ram Centennial School

2018

Percentage: 92.4%
